Sagemax experience

Initial situation, temporary design & color determination

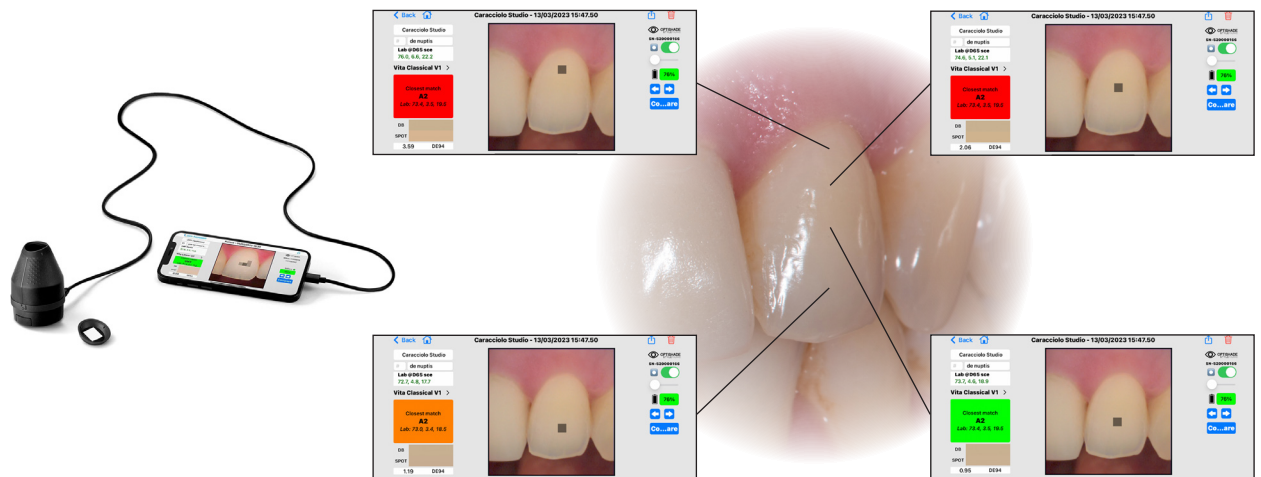

Initial situation of the patient after root canal treatment and temporaries made by the dentist.

Finalized preparation of teeth 11 and 21.

Professional temporaries made in the laboratory from PMMA plastic NEW OUTLINE by Anaxdent.

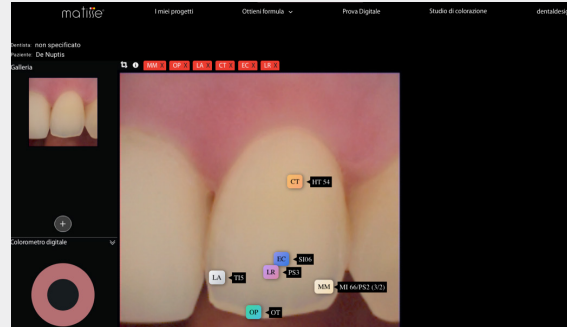

Color determination at four different locations on tooth 22 with Optishade Matisse by Smileline.

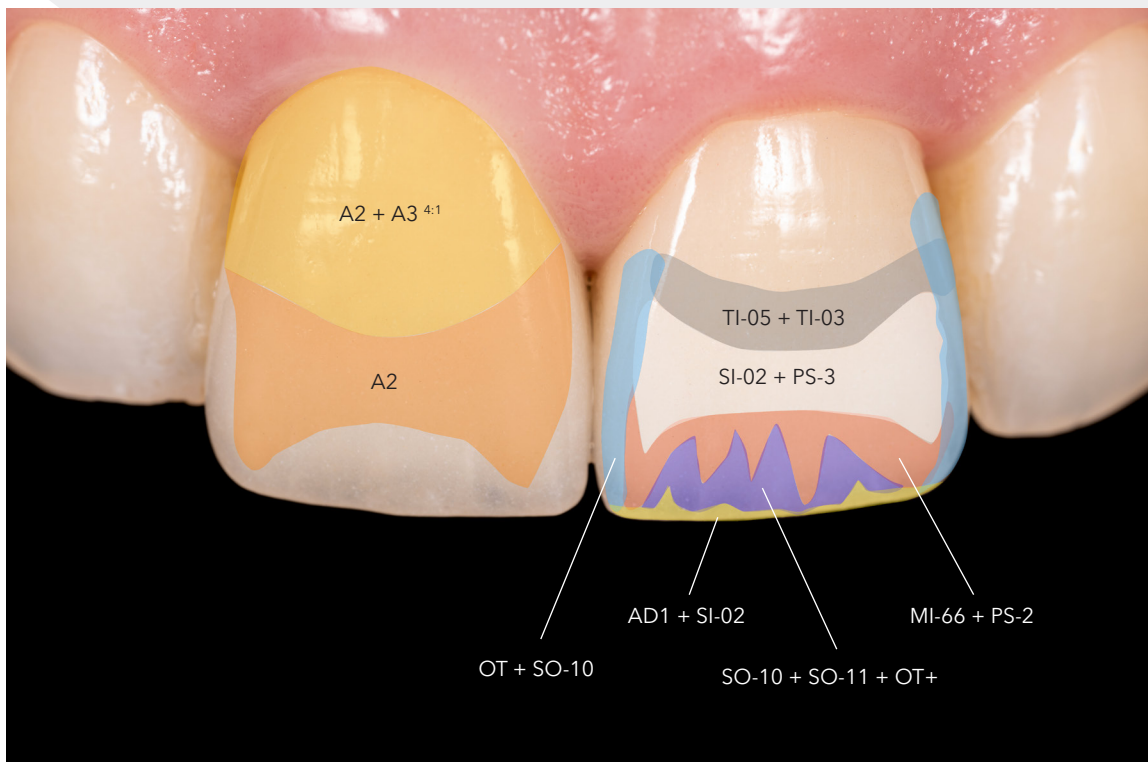

Framework fabrication & micro-layering

NexxZr T Multi A2 framework. Color adjusted with Creation Magic Color and the recipe from the Matisse iOS App.

Creation of the recipe for internal effects with the Matisse desk version.

Micro-layered with Creation ZI-CT ceramic by Creation Willi Geller.

Final result

Before.

After.

The finished crowns seamlessly blend into the oral cavity, and the color matches perfectly with the adjacent teeth.
