# Sagemax experience

Initial situation

A patient with severely discolored, deformed, and oversized teeth in both the upper and lower jaw.

Implantation and design process

Implantation of six implants in the upper and lower jaw, followed by an intraoral scan and the design of the restorations.

## Manufacturing process

Monolithic zirconia restorations were made using NexxZr T Multi. Prior to sintering, morphology and texture were applied with NexxZr Shine polishers. Staining and glazing were completed with Miyo and Ivocolor. Final polishing was done with NexxZr Shine.

## Final result

Before.

After.

The dentures were prepared using the FP1 concept. They fit perfectly and demonstrate excellent gum integration. The patient is overjoyed with her new smile.
