Sagemax experience

Morphology design

The morphology of the NexxZr⁺ white restoration was worked out with a series of burs and diamond wheels.

Internal staining

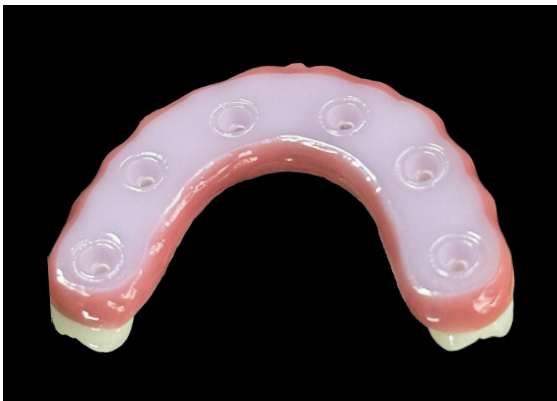

The internal staining was done with the infiltration liquids Prettau Aquarell (Co. Zirkozahn).

Gingiva layering and final polishing

Gingival layering was performed with creation ZI-CT (Co. Creation Willi Geller). The basal surface was polished with NexxZr Shine polishers.

Final result

The final result looks excellent.
